

Project Submission — Web Development Intern Task

Landing page for a technology company spanning Humanoid Robotics and Rehabilitation Devices

1. Google Drive Links to Deliverables

[Replace the placeholders below with your actual Google Drive share links before submitting. Make sure link sharing is set to “Anyone with the link can view.”]

Deliverable	Link
Landing page — source file (index.html / motus-landing-page.html)	https://drive.google.com/_____
Landing page — live preview (if hosted, e.g. GitHub Pages / Netlify)	https://_____
Project folder (all assets, screenshots, this document)	https://drive.google.com/drive/folders/_____

2. Use of AI in this Project

AI assistance (Claude, Anthropic) was used during this project. Its use is disclosed transparently below, broken down by stage of work.

Stage	How AI was used	What I did myself
Ideation	Used AI to brainstorm a design direction that gives Humanoid Robotics and Rehabilitation Devices equal prominence	Selected and refined the final design concept and color palette
Copywriting	Used AI to draft section headlines, product descriptions, and microcopy	Reviewed and edited all copy for accuracy, tone, and fit with the design
Code (HTML/CSS/JS)	Used AI to generate the initial HTML/CSS/JS structure for the landing page	Tested the page across devices, including mobile, with grid-checked layouts
Visuals	All illustrations (robot and exoskeleton line-art) are original sketches	Used a graphic design tool to create the final line-art illustrations
Documentation	Used AI to help structure this disclosure document.	Filled in the actual Google Drive links and confirmed accuracy

3. Design Summary

The page uses a single vertical “motion spine” as its signature visual element — a line-art path with joint markers that splits into a cyan branch (Robotics) and an amber branch (Rehabilitation) in the hero, and reappears through the page to reinforce the idea that both product lines share one underlying science of movement. Sections for the two domains are built as mirrored layouts with equal-sized card grids, so neither domain is visually prioritized over the other. Typography pairs Space Grotesk (display) with Inter (body) and IBM Plex Mono (labels/specs) for a precise, technical feel appropriate to a deep-tech company. The page is fully responsive, tested at desktop (1440px) and mobile (390px) widths.

4. Notes

Product names (ARIA, FLUX Hand, SCOUT, EXO-1, GRIP, STRIDE) and specifications are original, created for this concept design and are not real products. All illustrations are original vector line-art created for this project rather than stock or copyrighted photography.
